Why? Because it's a perfect solution for small to medium businesses who want a reliable, yet inexpensive, platform that does not require the investment of a full-blown PC. They typically want an internet connection, a printer, a phone line, a power connection and a data storage device. And if you don't need a whole lot of storage, then you'll be happy to know that even a 2GB USB stick will

give you plenty of storage for a few games, some music and maybe some video. So I guess that means that if MAME isn't supported on Windows 2000, then there's a good chance that it won't be supported either. Well, that's just not the case. The best place to go about finding drivers for any system is to go to their manufacturer's website. The manufacturer's website is usually the most up to date, and it's often easier than trying to figure out how to find the driver through the Windows Update mechanism. It's not that easy. You need to get a copy of the Windows 2000 Service Pack 3 patch (It's a bit of a pain, but once you download it, you'll be able to upgrade the operating system from Windows 2000 to Windows XP. The process has a lot of steps, but the total time will be around three minutes. I also recommend that you get the Visual C++ Redistributable 2005 at Once you've done those two things, you'll be able to upgrade to Windows XP. The first time you install it, you'll have to use the Upgrade Wizard. Once you get that done, it's very easy. You'll need a Windows 2000 installation disc and an XP installation disc. If you don't have an XP installation disc, you can download one from Yes, you'll need to have two XP installation discs. With the XP installation discs, you'll need to tell the XP installer where to find the Windows 2000 installation disc. This
